

# Natural Farming in Europe

## An Indian-European exchange on agroecology

2 young women farmer from **Andhra Pradesh Community Managed Natural Farming (APCNF)** present their success story: building soil fertility with intensive, multi-layered crop diversity and biomass production, boosting the microbiome, managing water and climate risks with additional cropping, following nine simple principles and plenty of farmer led innovation and collaboration. No pesticides, no fertilizers, own seeds, and an “anytime money garden” for every family - That is how over one million small farmers secure healthy food, stable incomes, and resilient community structures led by women’s village groups.

**What can we learn  
from Indian farmers?  
What can we offer?**

10.02.2026 -  
07.03.2026

Events tour through  
Germany, Switzerland,  
Poland, the Netherlands,  
and Belgium
