

APCNF: Farming for Climate and Health

Andhra Pradesh Community Managed Natural Farming has enabled over one million smallholder farmers in India to transition towards climate-friendly agriculture and healthier food systems. At this event, an Indian delegation presents the APCNF model, with women farmers sharing practical insights from their own fields. The discussion connects farming practice, climate research and food system transformation.

What can we learn from Indian farmers about climate friendly and healthy agriculture?

with contributions from Potsdam
Institute for Climate Impact Research
and Alexander Müller (TMG)

Monday, 23.02.2026

7 p.m.

KulturMarktHalle
Hanns-Eisler-Straße 93
